# Android APK脱壳--腾讯乐固、360加固一键脱壳

#### 编码前线

9 2018.09.28 17:22:18 字数 478 阅读 59,944

#### 概述

现在使用Proguard进行混淆的代码,也很容易被破解,所以就出现了加固工具,让反编译的难度更大。但是有了加固技术,就会有反加固技术,正所谓道高一尺魔高一丈。

经过加固后的apk,通过 dex2jar 反编译:

#### 腾讯乐固:

360加固:

360jiagu.png

从上面可以看出,经过加固后的apk,通过常规方法反编译无法获取到源码。

## 下载工具

#### 脱壳工具FDex2

通过Hook ClassLoader的loadClass方法,反射调用getDex方法取得Dex(com.android.dex.Dex类对象),在将里面的dex写出。

下载地址:

链接:https://pan.baidu.com/s/1smxtinr 密码:dk4v

## VirtualXposed

VirtualXposed: 无需root手机即可使用xp框架。

下载地址:

https://vxposed.com/

## 脱壳

Step1:

将 Virtual Xposed 、 FDex2 和需要脱壳的应用都安装到手机上。

Step2:

## 启动 VirtualXposed ,并在 VirtualXposed 中安装 FDex2:

vp-install-fdex2.gif

Step3:

在 VirtualXposed 中激活 FDex2:

active-fdex2.gif

Step4:

在 Virtual Xposed 中安装要脱壳的应用,方法和Step2一样。

Step5:

启动 Virtual Xposed 中的 FDex2 ,并配置要脱壳的应用。

fdex2-config.png

Step6:

在 Virtual Xposed 中运行要脱壳的应用。

Step7:

脱壳后的dex文件:

导出脱壳的dex文件:

root设备:

```
1 | adb root
2 | adb pull /data/user/0/iv.va.exposed/virtual/data/user/0/{packageName} {电脑_
```

#### 未root设备:

在 Virtual Xposed 中,设置-->高级设置-->文件管理,安装文件管理器,然后通过文件管理器进入到指定的目录,通过 分享 功能发到电脑上。

Step8:

通过 dex2jar 对 脱壳的dex进行反编译:

从上图就可以看到脱壳后的dex文件被成功的反编译。

#### FDex2核心代码MainHook

```
package com.ppma.xposed;
    import java.io.File;
    import java.io.FileOutputStream;
    import java.io.IOException;
    import java.io.OutputStream;
    import java.lang.reflect.Method;
    import de.robv.android.xposed.IXposedHookLoadPackage;
    import de.robv.android.xposed.XC MethodHook;
    import de.robv.android.xposed.XSharedPreferences;
    import de.robv.android.xposed.XposedBridge;
    import de.robv.android.xposed.XposedHelpers;
    import de.robv.android.xposed.callbacks.XC_LoadPackage;
    public class MainHook implements IXposedHookLoadPackage {
        XSharedPreferences xsp;
        Class Dex;
        Method Dex_getBytes;
        Method getDex;
        String packagename;
        public void handleLoadPackage(XC LoadPackage.LoadPackageParam lpparam) thr
            xsp = new XSharedPreferences("com.ppma.appinfo", "User");
            xsp.makeWorldReadable();
            xsp.reload();
28
            initRefect();
            packagename = xsp.getString("packagename", null);
            XposedBridge.log("设定包名: "+packagename);
            if ((!lpparam.packageName.equals(packagename))||packagename==null) {
                XposedBridge.log("当前程序包名与设定不一致或者包名为空");
                return;
            XposedBridge.log("目标包名: "+lpparam.packageName);
            String str = "java.lang.ClassLoader";
```

```
String str2 = "loadClass";
                                XposedHelpers.findAndHookMethod(str, lpparam.classLoader, str2, String
                                          protected void afterHookedMethod(MethodHookParam param) throws Thr
                                                     super.afterHookedMethod(param);
                                                     Class cls = (Class) param.getResult();
44
                                                    if (cls == null) {
                                                               //XposedBridge.log("cls == null");
                                                               return;
                                                    String name = cls.getName();
                                                    XposedBridge.log("当前类名: " + name);
                                                    byte[] bArr = (byte[]) Dex_getBytes.invoke(getDex.invoke(cls,
                                                    if (bArr == null) {
                                                               XposedBridge.log("数据为空:返回");
                                                               return;
                                                    XposedBridge.log("开始写数据");
                                                    String dex_path = "/data/data/" + packagename + "/" + packager
                                                    XposedBridge.log(dex_path);
                                                    File file = new File(dex_path);
                                                    if (file.exists()) return;
                                                    writeByte(bArr, file.getAbsolutePath());
                      public void initRefect() {
                                try {
                                          Dex = Class.forName("com.android.dex.Dex");
                                          Dex_getBytes = Dex.getDeclaredMethod("getBytes", new Class[0]);
                                          getDex = Class.forName("java.lang.Class").getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getDeclaredMethod("getD
